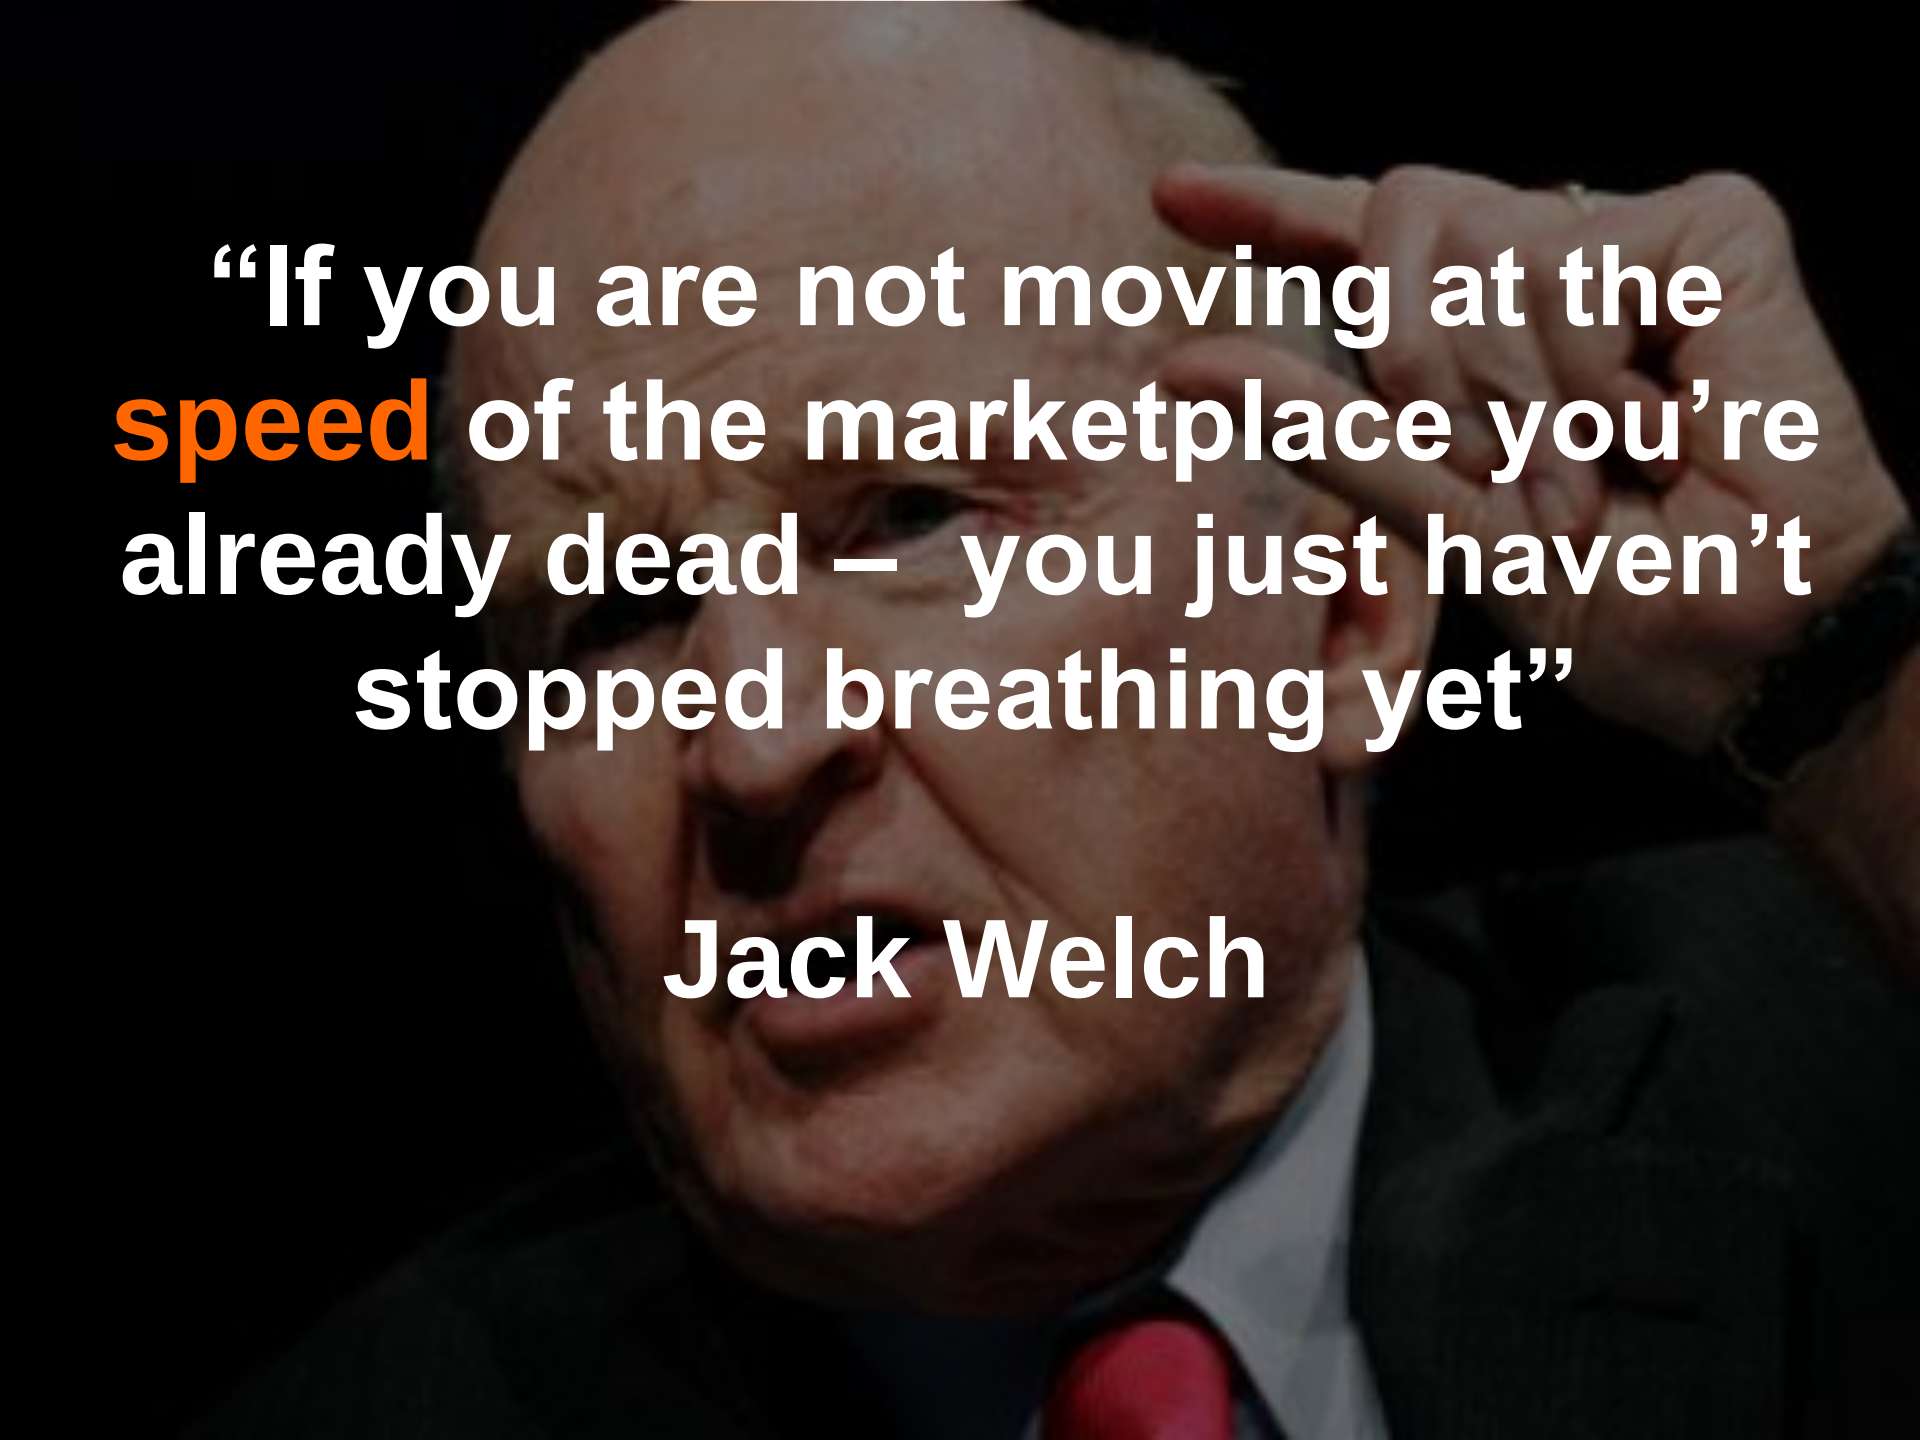
Framtiden inom mjukvaruutveckling, Växjö, November 2016



“If you are not moving at the speed of the marketplace you’re already dead – you just haven’t stopped breathing yet”
Jack Welch

Three Key Take-Aways

- Increasing **SPEED** trumps ANY other improvement R&D can provide to the company – the goal is **continuous deployment** of new functionality
- Effective use of **data** from customers and products in the field is the next area to exploit and monetize
- Strategic use of the **ecosystems** around your systems and services is critical as it allows for agility, risk sharing and allows the company to focus on the key differentiators

Software Changes Everything

Gripen Drone

Air Pollution

Control of CO_2 emissions of factories, pollution emitted by cars and toxic gases generated in farms.

Smartphones Detection

Detect iPhone and Android devices and in general any device which works with Wifi or Bluetooth interfaces.

Electromagnetic Levels

Measurement of the energy radiated by cell stations and and WiFi routers.

Smart Roads

Warning messages and diversions according to climate conditions and unexpected events like accidents or traffic jams.

Smart Lighting

Intelligent and weather adaptive lighting in street lights.

Water Leakages

Detection of liquid presence outside tanks and pressure variations along pipes.

Vehicle Auto-diagnosis

Information collection from CanBus to send real time alarms to emergencies or provide advice to drivers.

Item Location

Search of individual items in big surfaces like warehouses or harbours.

Smart Parking

Monitoring of parking spaces availability in the city.

Water Quality

Study of water suitability in rivers and the sea for fauna and eligibility for drinkable use.

Golf Courses

Selective irrigation in dry zones to reduce the water resources required in the green.

Quality of Shipment Conditions

Monitoring of vibrations, strokes, container openings or cold chain maintenance for insurance purposes.

Nature of Product Innovation is Shifting

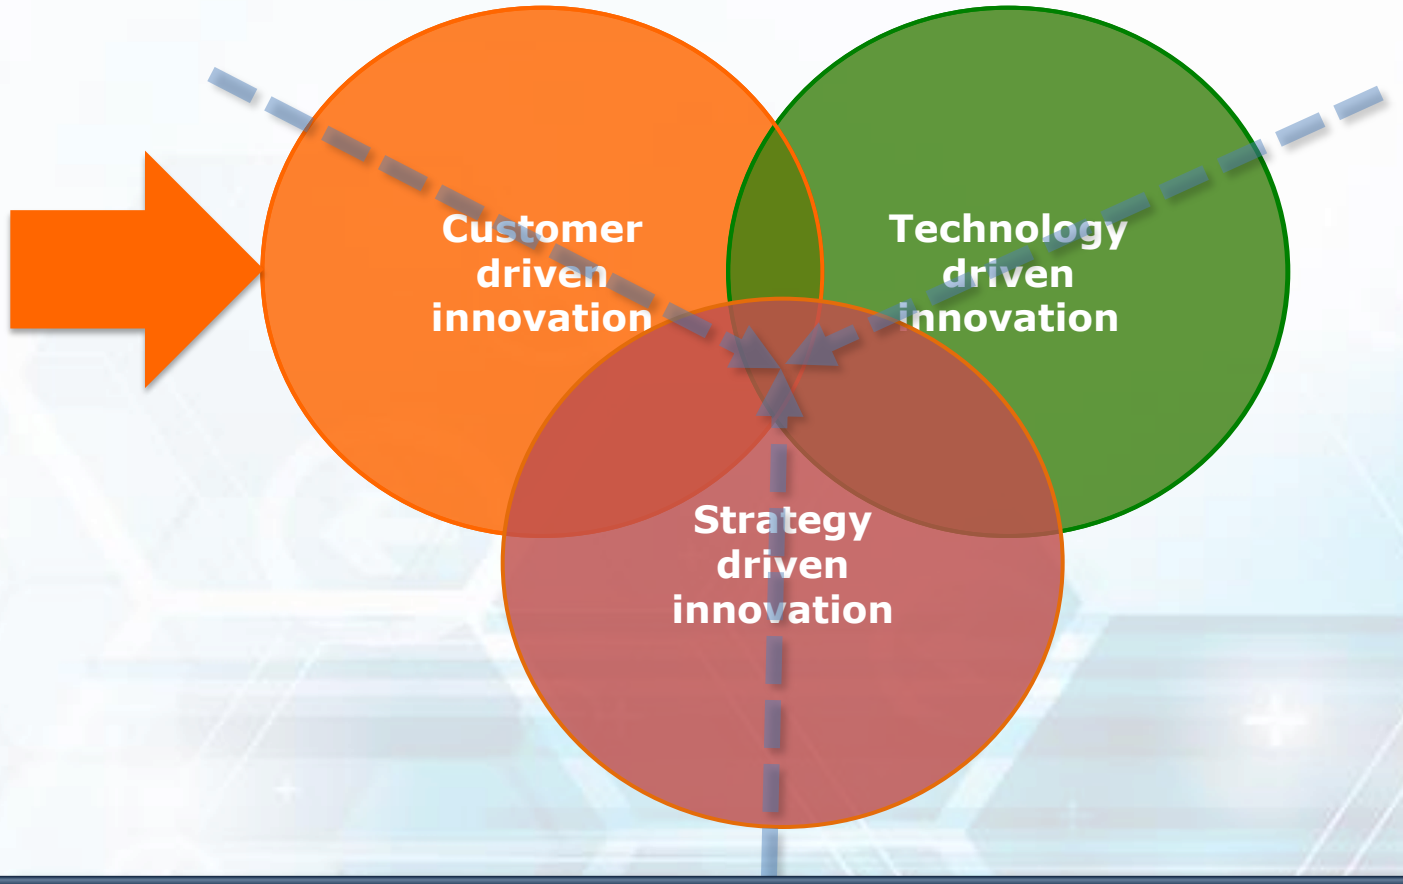
- More than 90% of R&D is related to software according to Ericsson
  - The world's 5th largest software company
- 70% of all innovation is related to software according to AB Volvo
- 80-90% of all innovation in a car is related to electronics (HW & SW) according to Volvo Cars

https://hbr.org/2015/06/does-hardware-even-matter-anymore

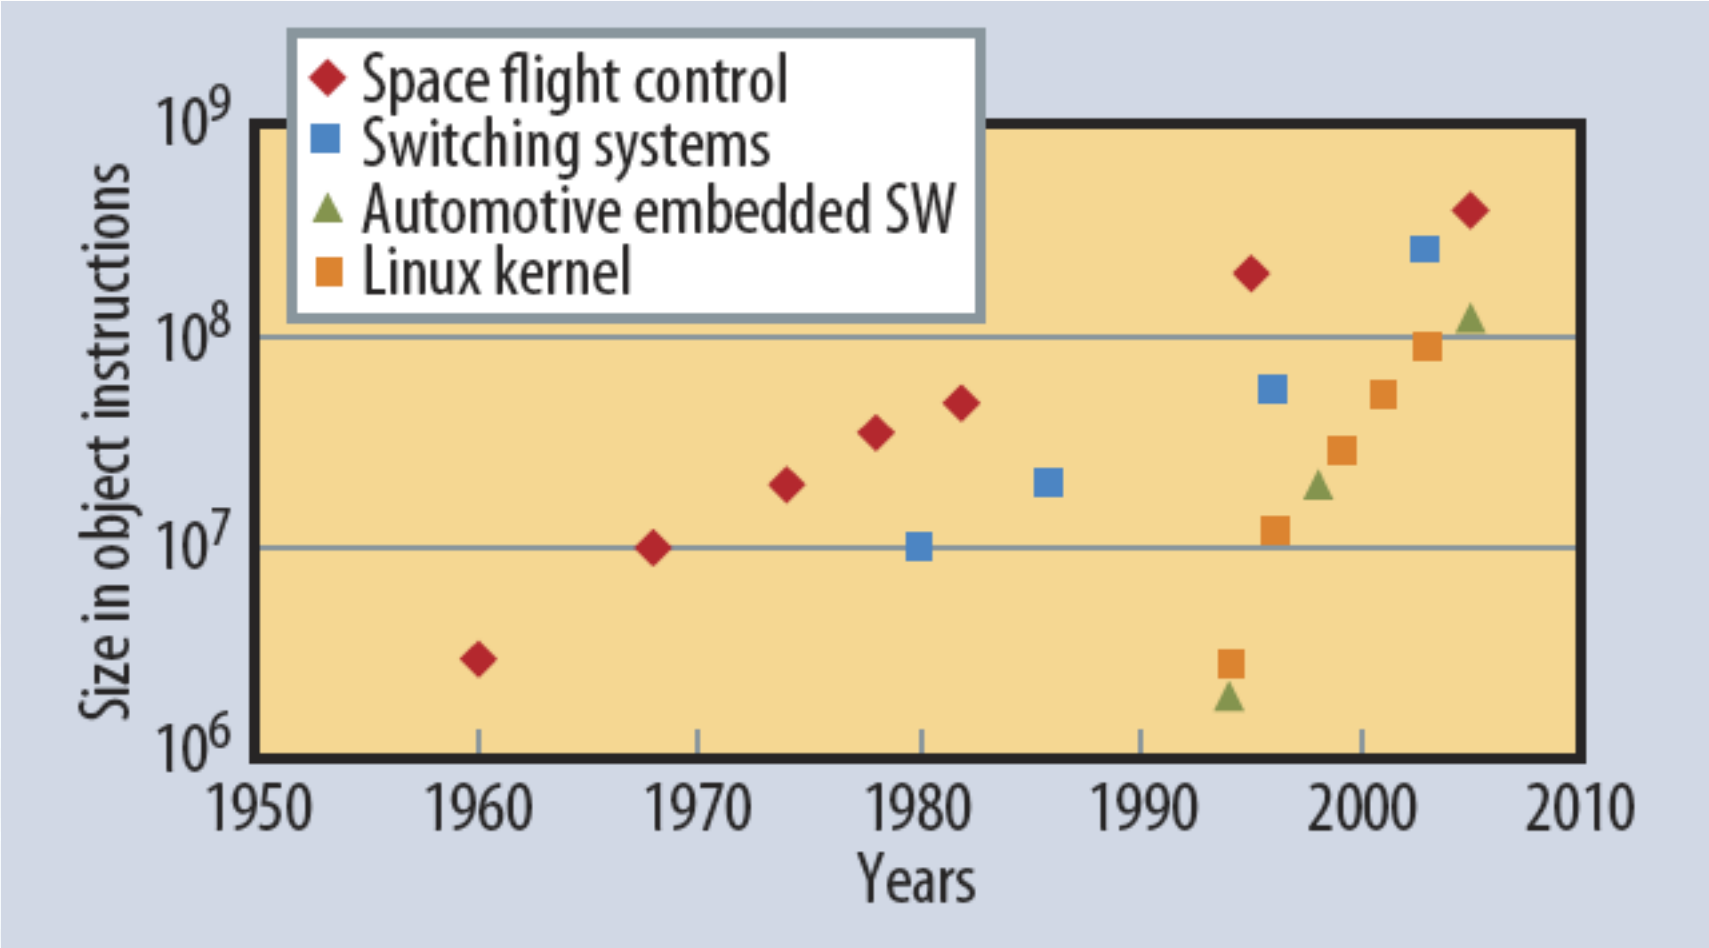
Towards Product as a Service

This requires continuous deployment throughout the lifetime of the product

Innovation Approaches



This requires continuous experimentation with customers



10x every ~7 years

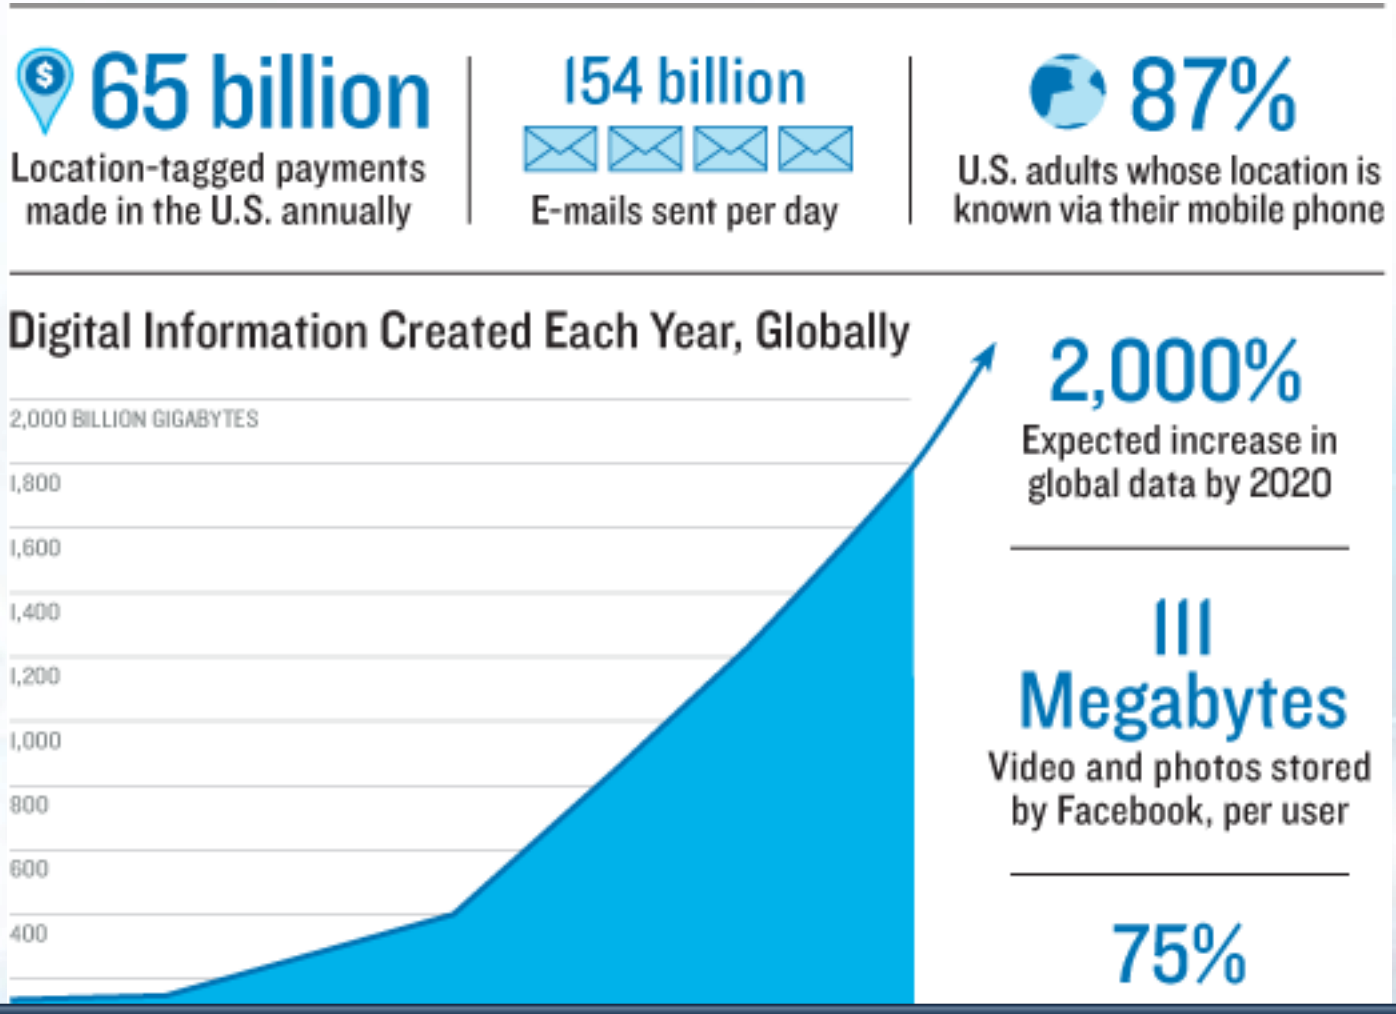
Project

Volvo Cars

- 90% of innovations in “electronics and SW”
- Moving major parts of SW development in-house
- Connected cars get updated with new functionality every 2 days
- Volvo has defined the “system scope” to include the car, the cloud services and the mobile apps

Data Generated in the World



50 Terabytes of data are created every second

Trend: Need for Speed

Value Creation Shifts

Emerging companies highlight importance
of user contribution and social connectedness

Level of User Contribution

Founded	1984	1995	2004	2009
1M users	~6 years	30 months	10 months	?
50M users	N/A	~80 months	~44 months	~ 1 month

Need for Speed in R&D – An Example

- Company X: R&D is **10%** of revenue, e.g. 100M$ for a 1B$ product
- New product development cycle: **12 months**

- Alternative 1: improve efficiency of development with 10%
  - **10 M$** reduction in development cost
- Alternative 2: reduce development cycle with 10%
  - **100M$** add to top line revenue (product starts to sell 1.2 months earlier)

No efficiency improvement will outperform cycle time reduction

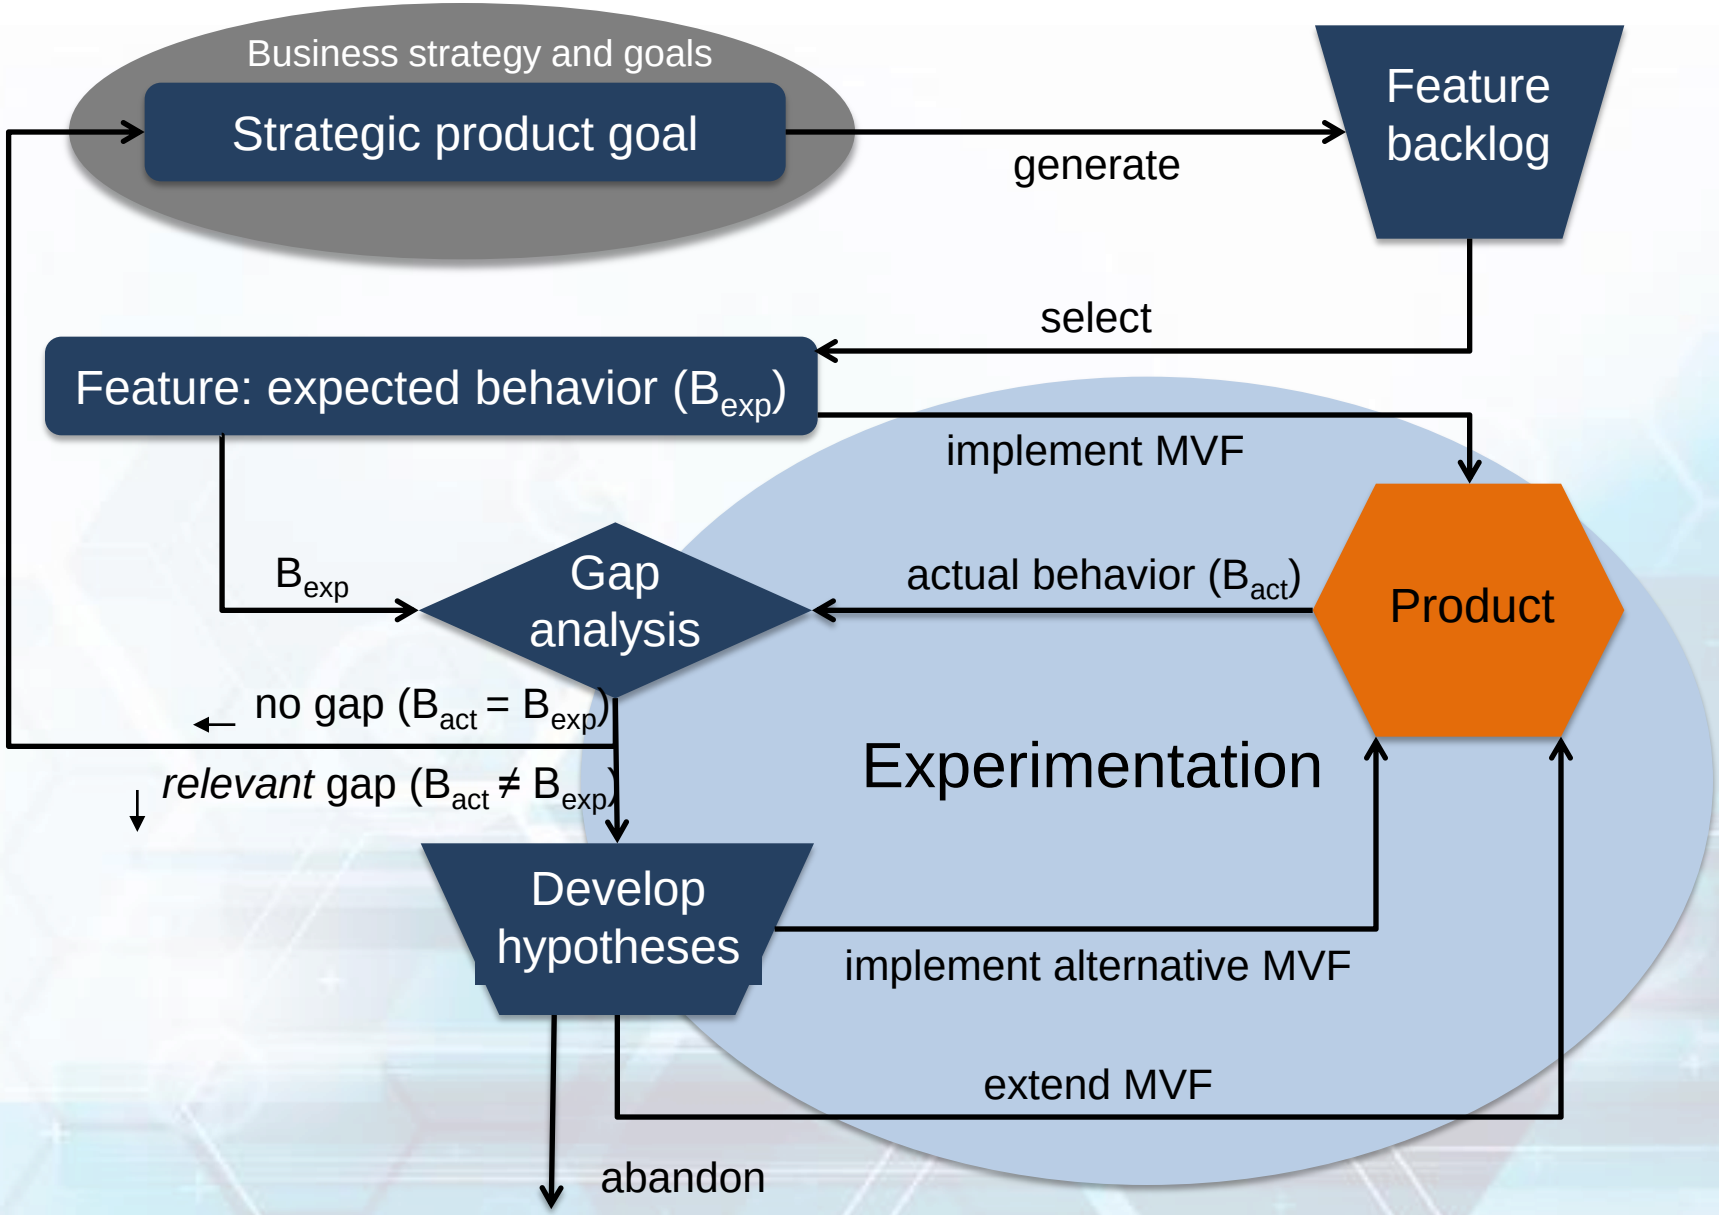
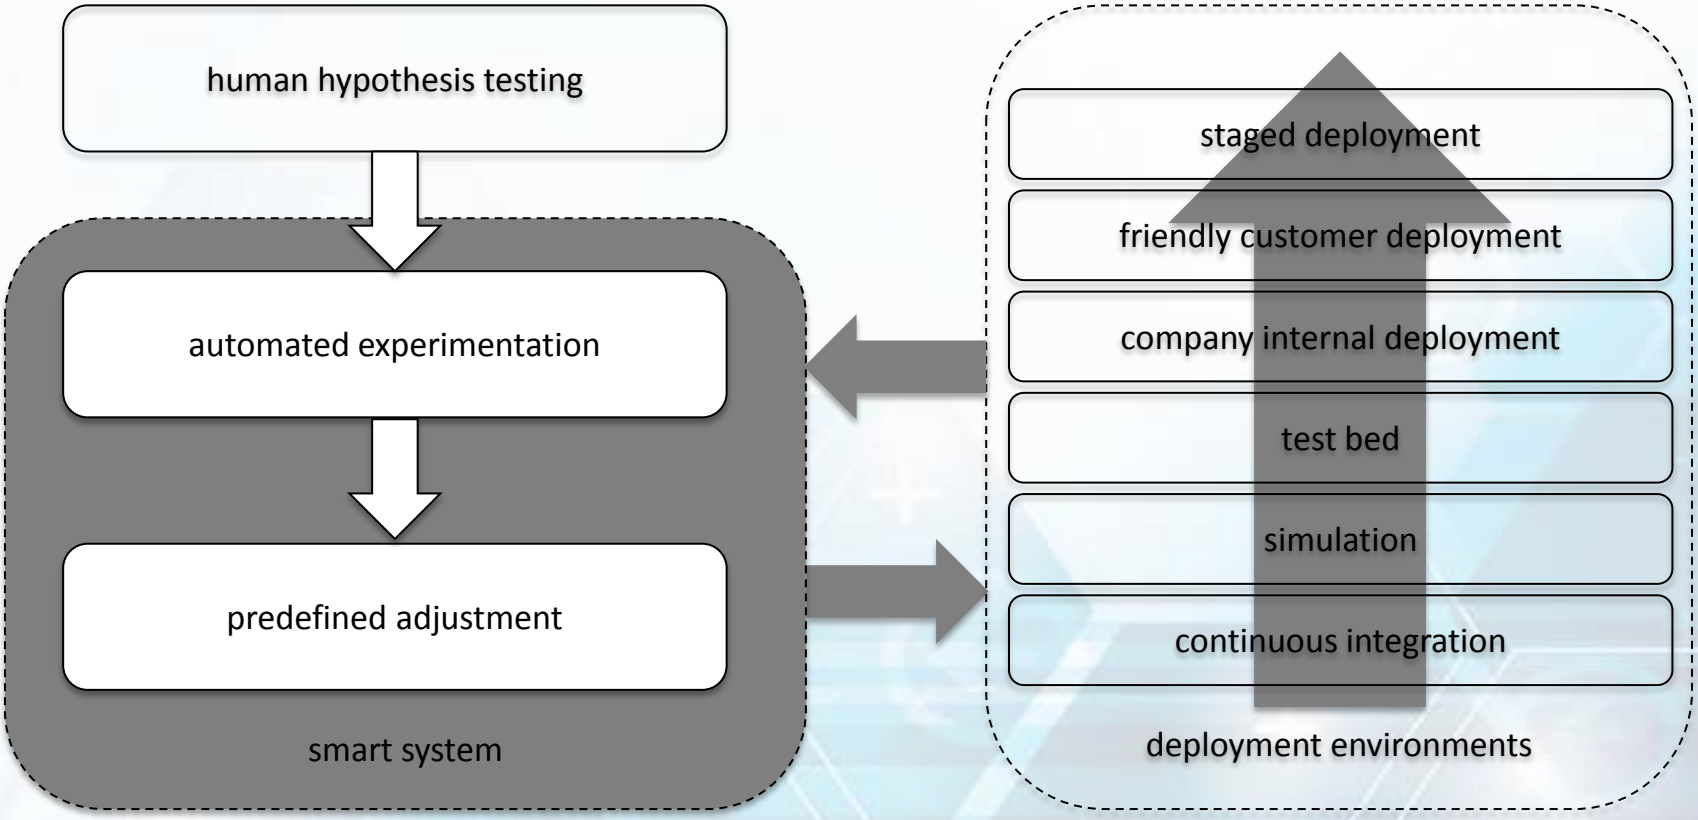
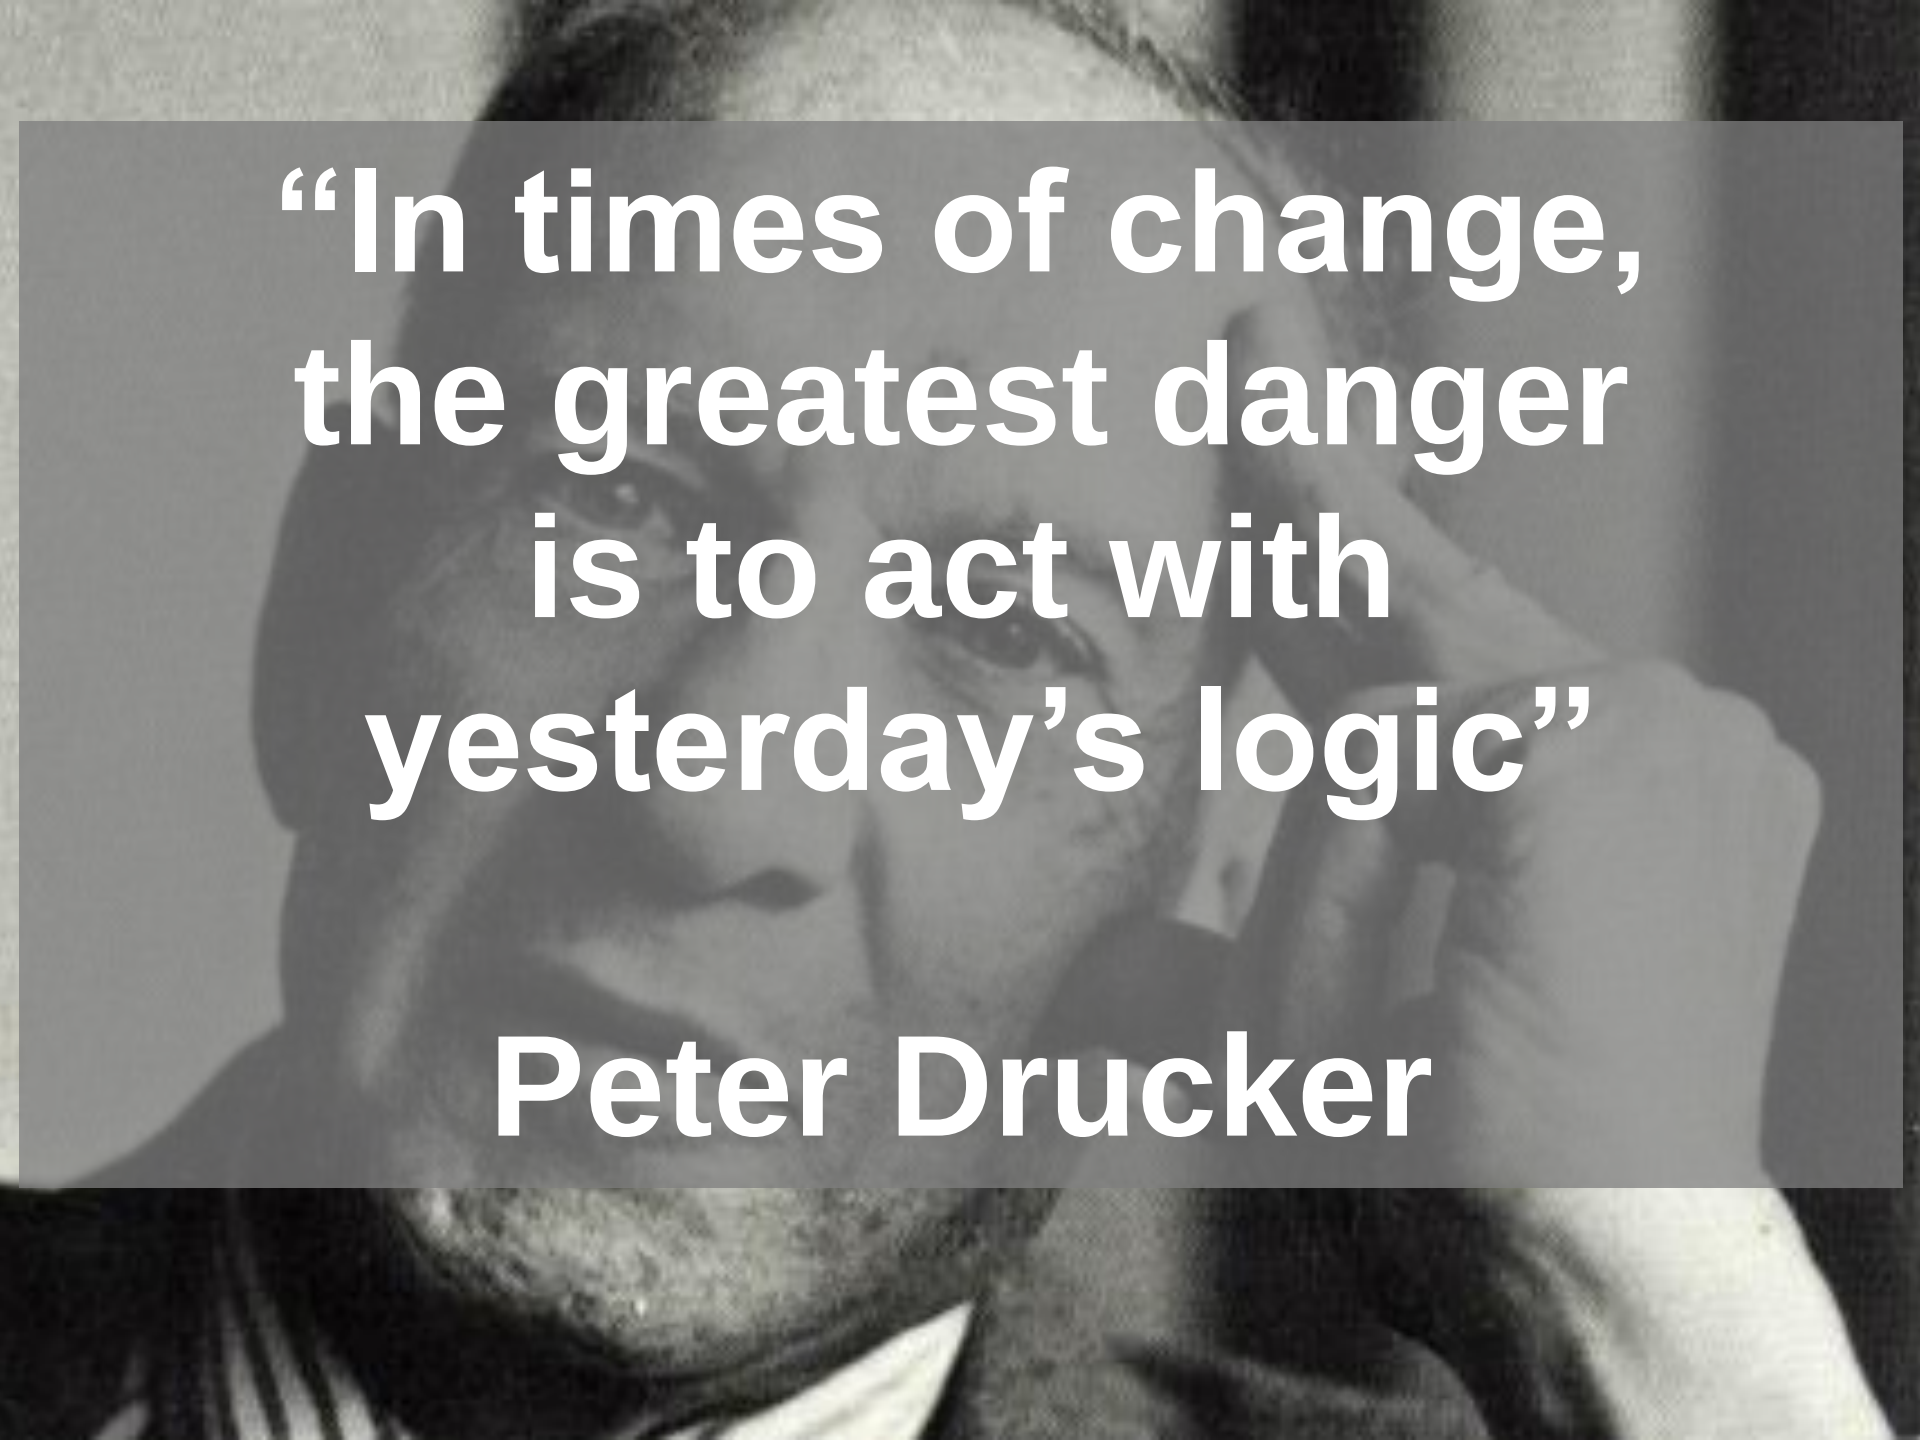
The HYPEX Model



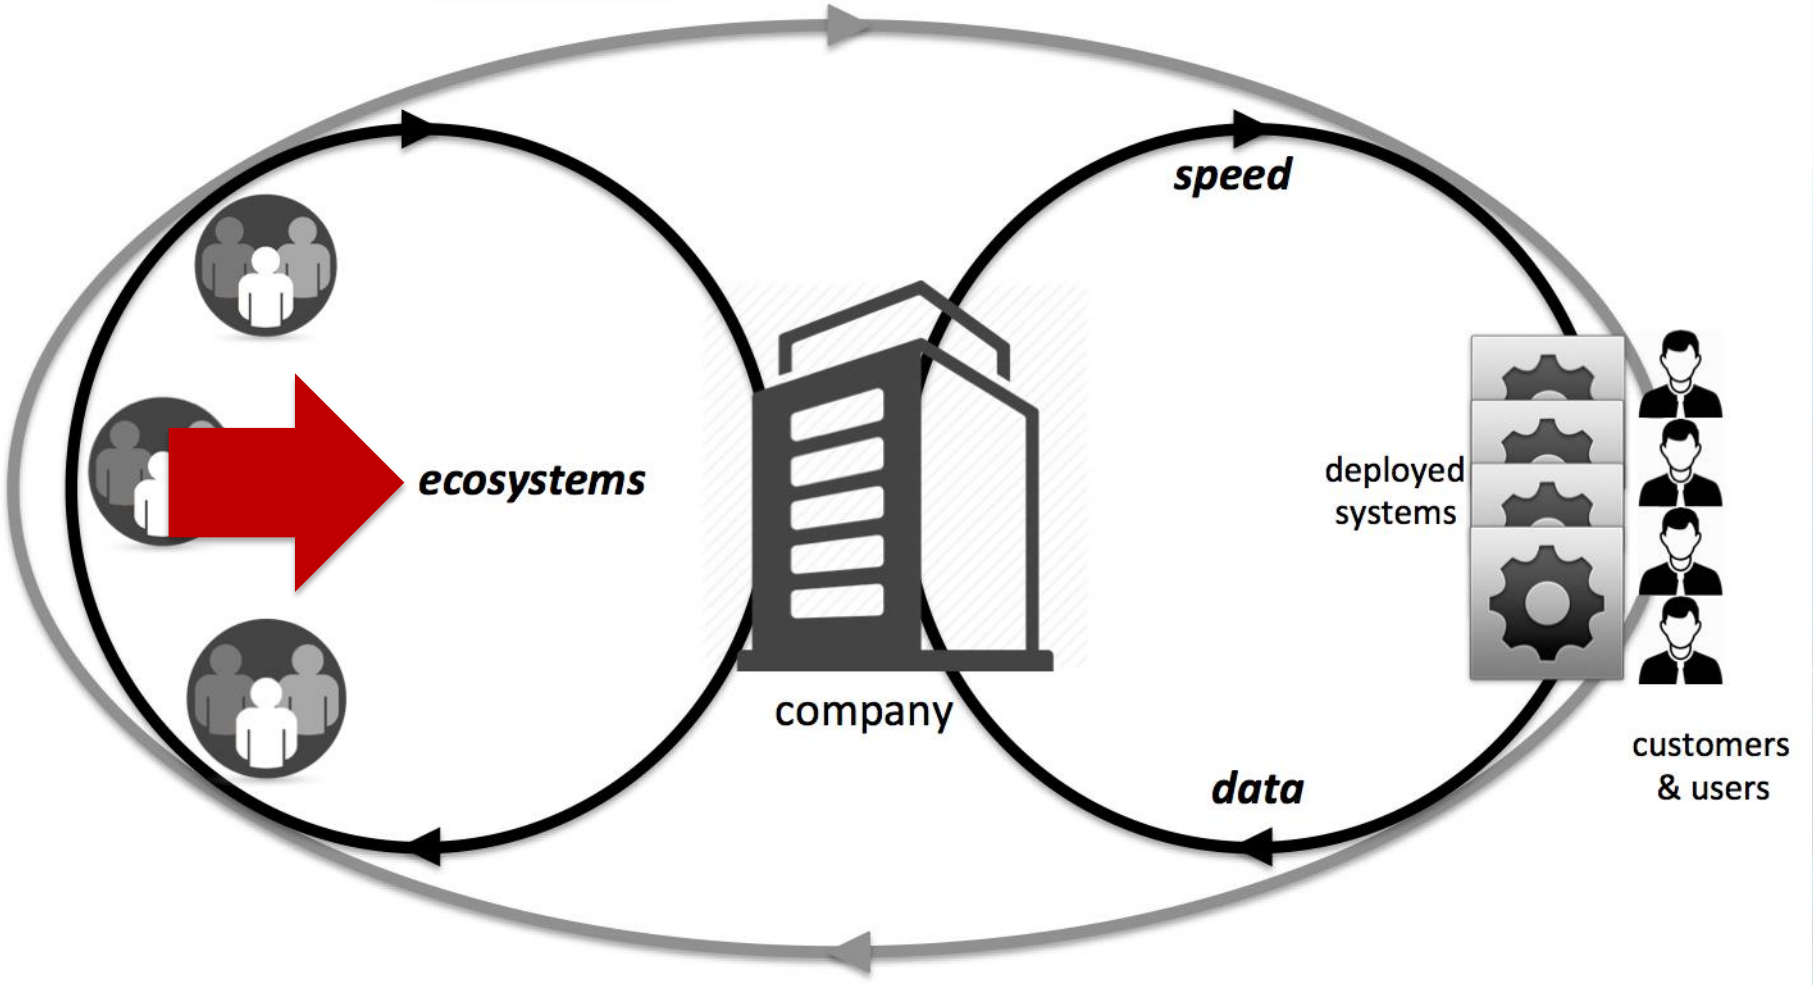
Data-Driven Continuous Evolution of Autonomous Systems





“In times of change, the greatest danger is to act with yesterday’s logic”
Peter Drucker

Stairway to Heaven 2.0

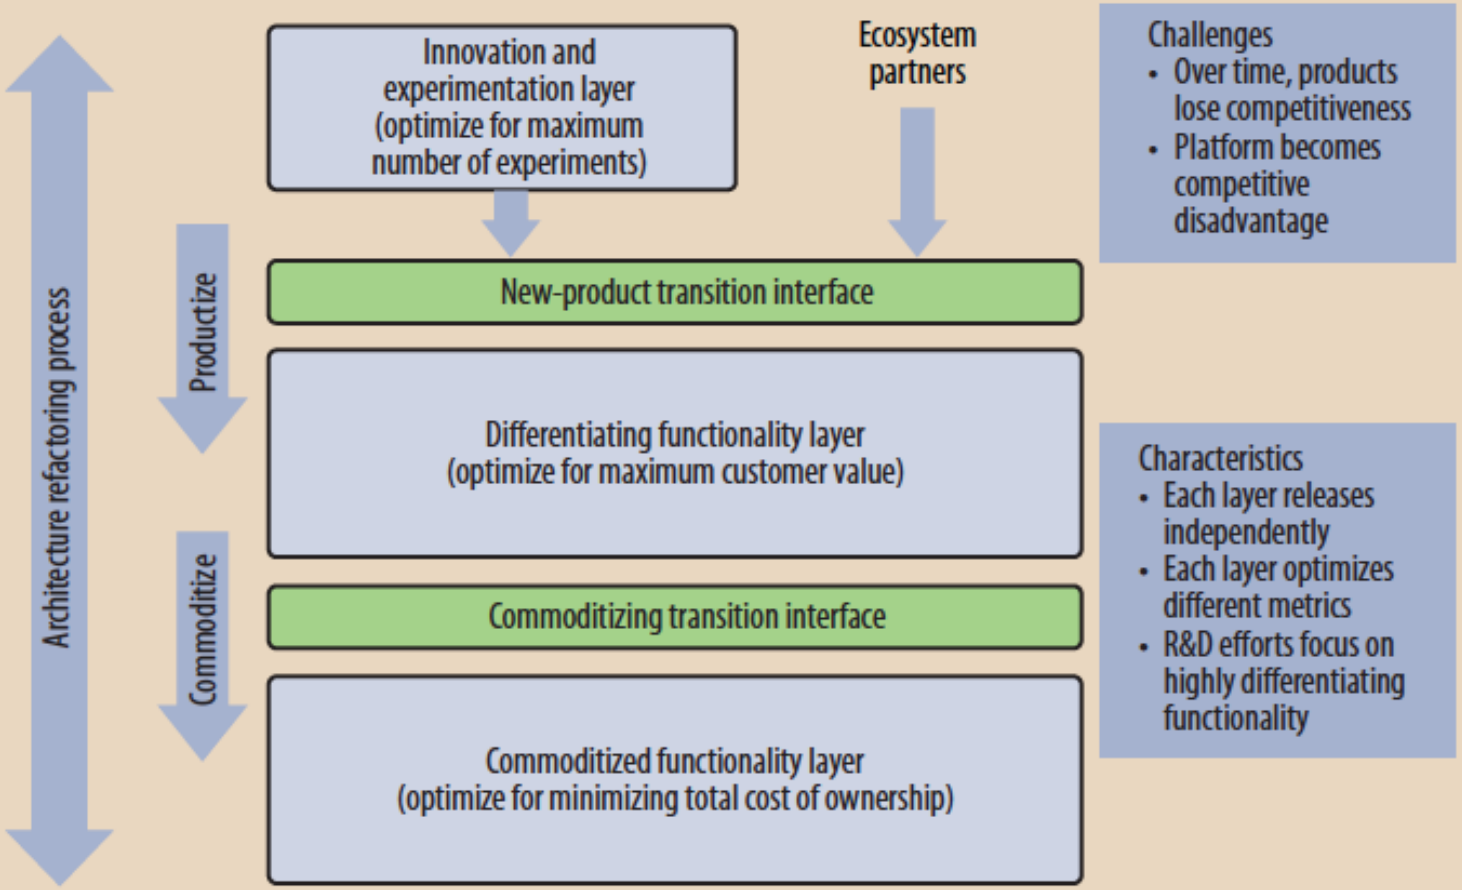


Business Ecosystem

Economic community supported by a foundation of interacting organizations and individuals, which can also be perceived as organisms of the business world (Moore, 1993).

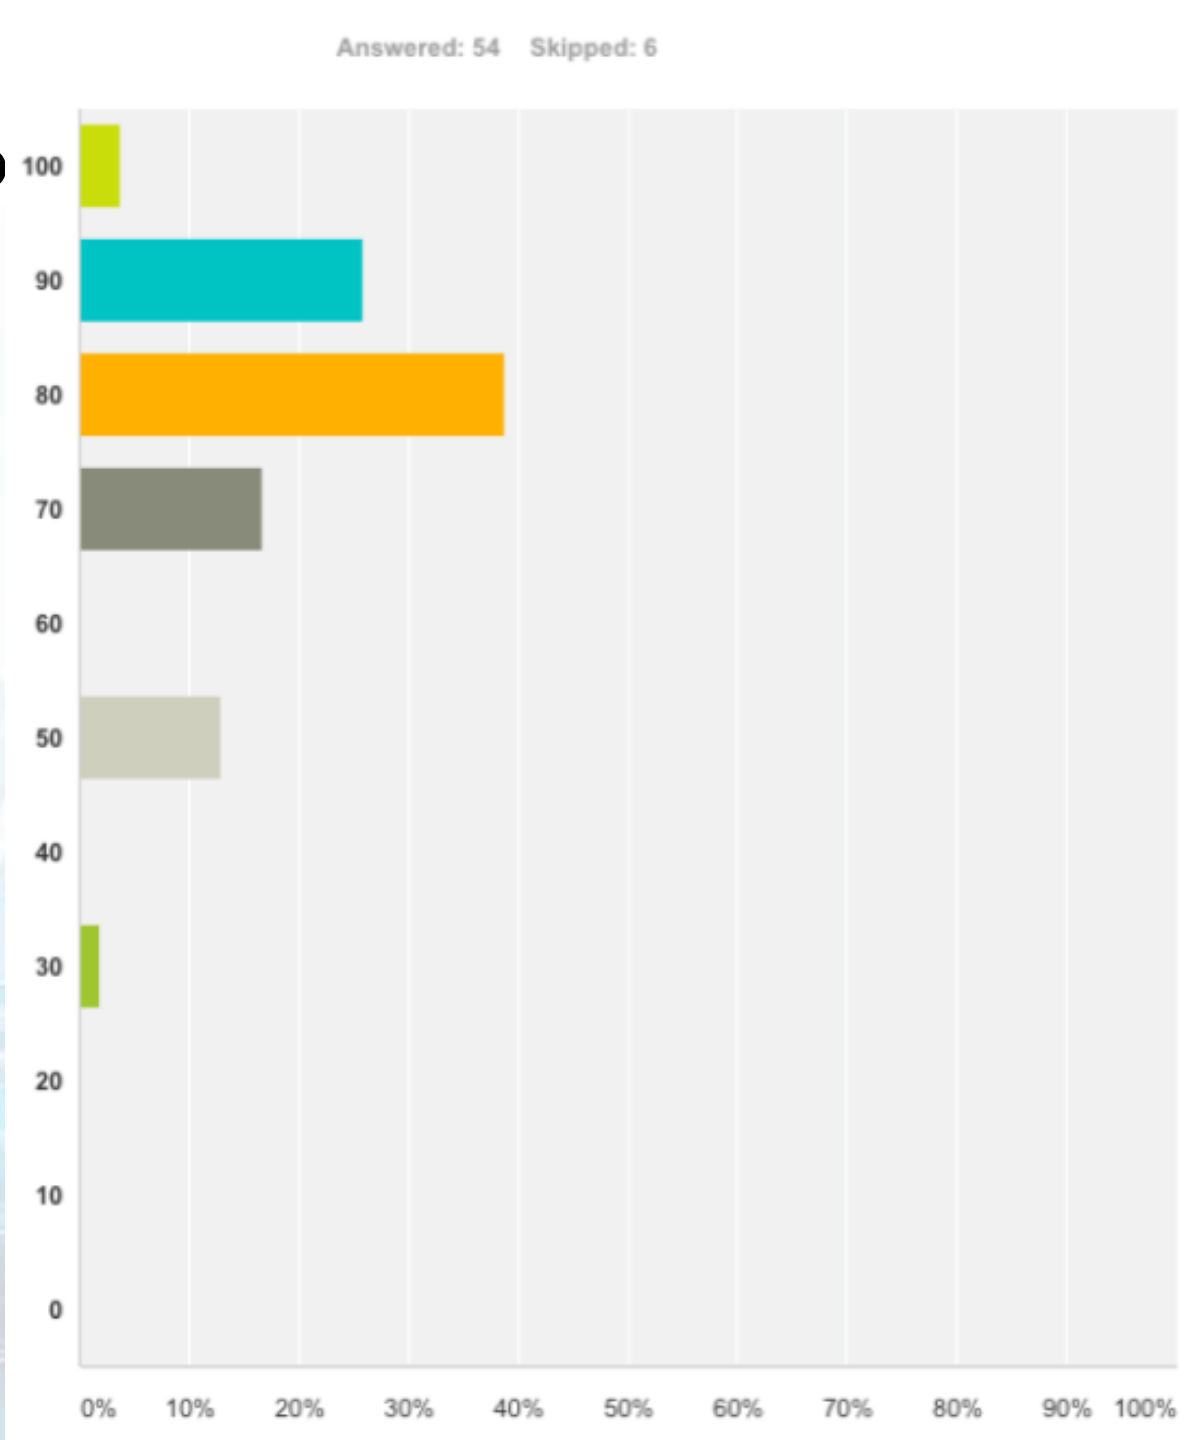
1. Symbiotic relationship
2. Co-evolution
3. Platform: tools, services and technology used in ecosystem to enhance performance

3LPM: Three Layer Product Model

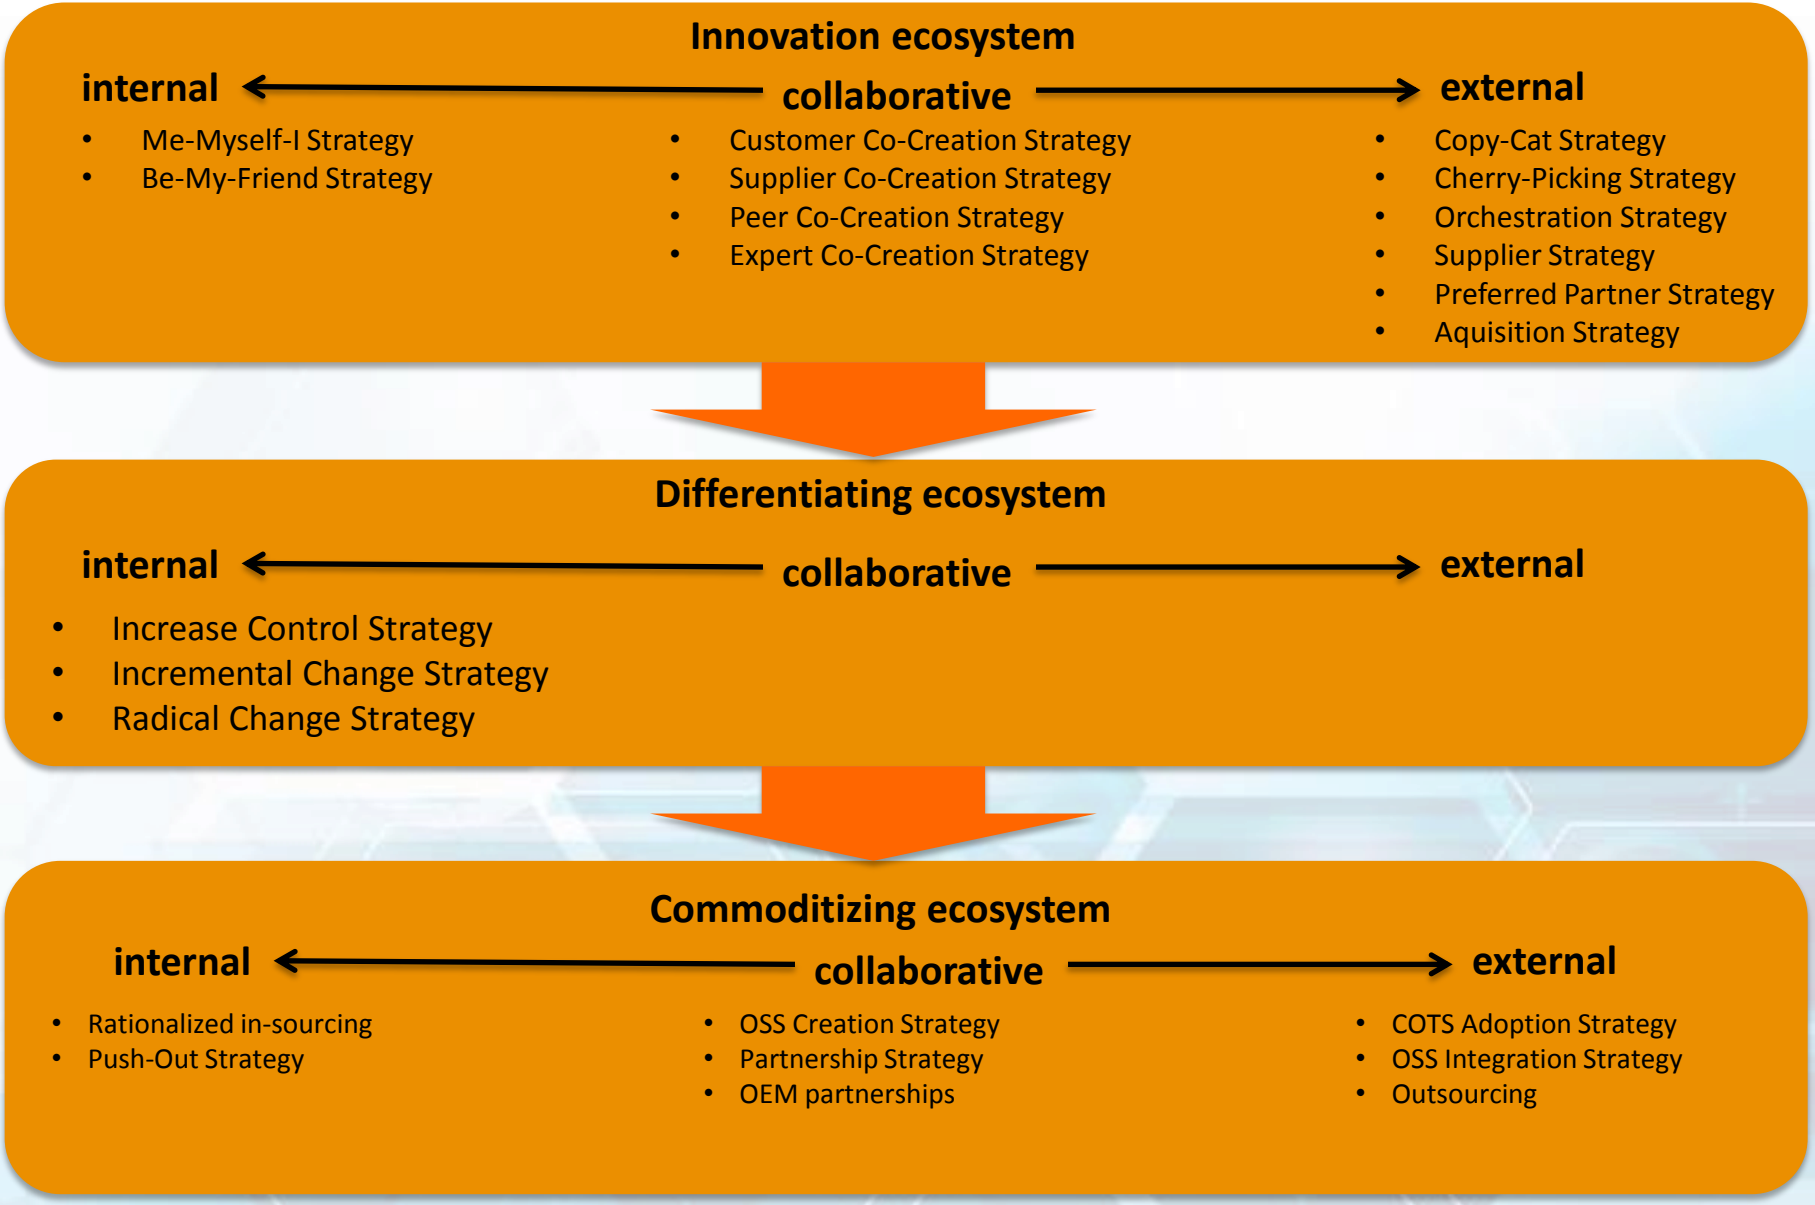


Bosch, J. (2013). Achieving Simplicity with the Three-Layer Product Model, *IEEE Computer*, Vol. 46 (11), pp. 34-39.

What % of R&D for Commodity?



TeLESM: Three Layer Ecosystem Strategy Model



Stairway to Heaven: Ecosystems

Levels	
Internally focused	do everything in-house unless it is really impossible
Ad-hoc ecosystem engagement	individuals take ad-hoc decisions to engage with ecosystem partners, but local optimization
Tactical ecosystem engagement	ecosystem engagement is centralized, but driven by tactical (rather than strategic) considerations
Strategic single ecosystem management	one of the ecosystem types is managed strategically
Strategic multi-ecosystem management	all three types (I, D, C) are managed strategically

Overview

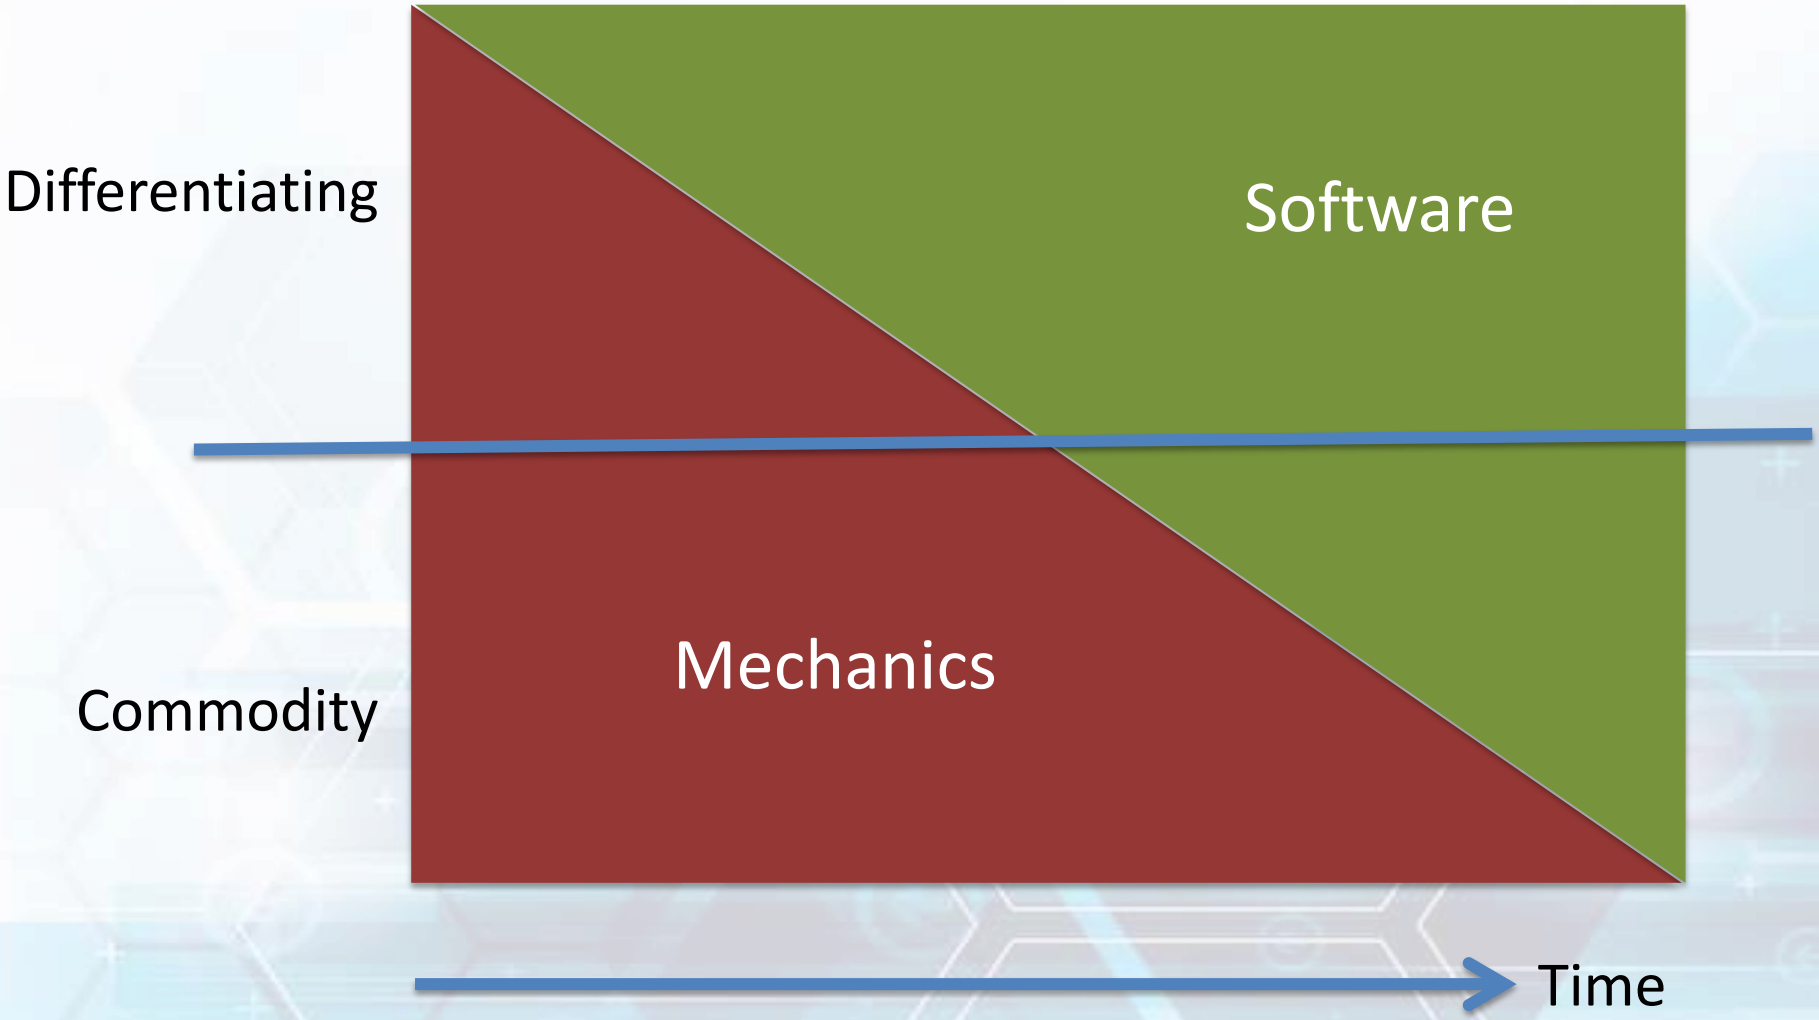
- Trends in Industry: Need for Speed
- Stairway to Heaven
  - Speed
  - Data
  - Ecosystems
- Implications for Systems Engineering
- Conclusion

Atoms versus Bits



Implications

1. Build it in **software** unless you really, really can’t
2. Build it in **hardware** and keep it flexible (FPGAs instead of ASICS) unless you really, really can’t
3. Build it in **mechanics** if you HAVE to and keep modular, easily replaceable and simple

Implications

From	To
• Systems built to last	• Systems built to evolve
• Opinions-based decision making (experience)	• Data-driven decision making
• Deeply integrated architectures	• Modularized architectures
• Hierarchical organizational model	• Ecosystem of partners
• Satisfying the requirements	• Constant experimentation and innovation
• Static certification	• Dynamic, continuous certification

Overview

- Vem är jag? Wie ben ik? Who am I?
- Trends in Industry: Need for Speed
- Stairway to Heaven
  - Speed
  - Data
  - Ecosystems
- Implications for Systems Engineering
- Conclusion

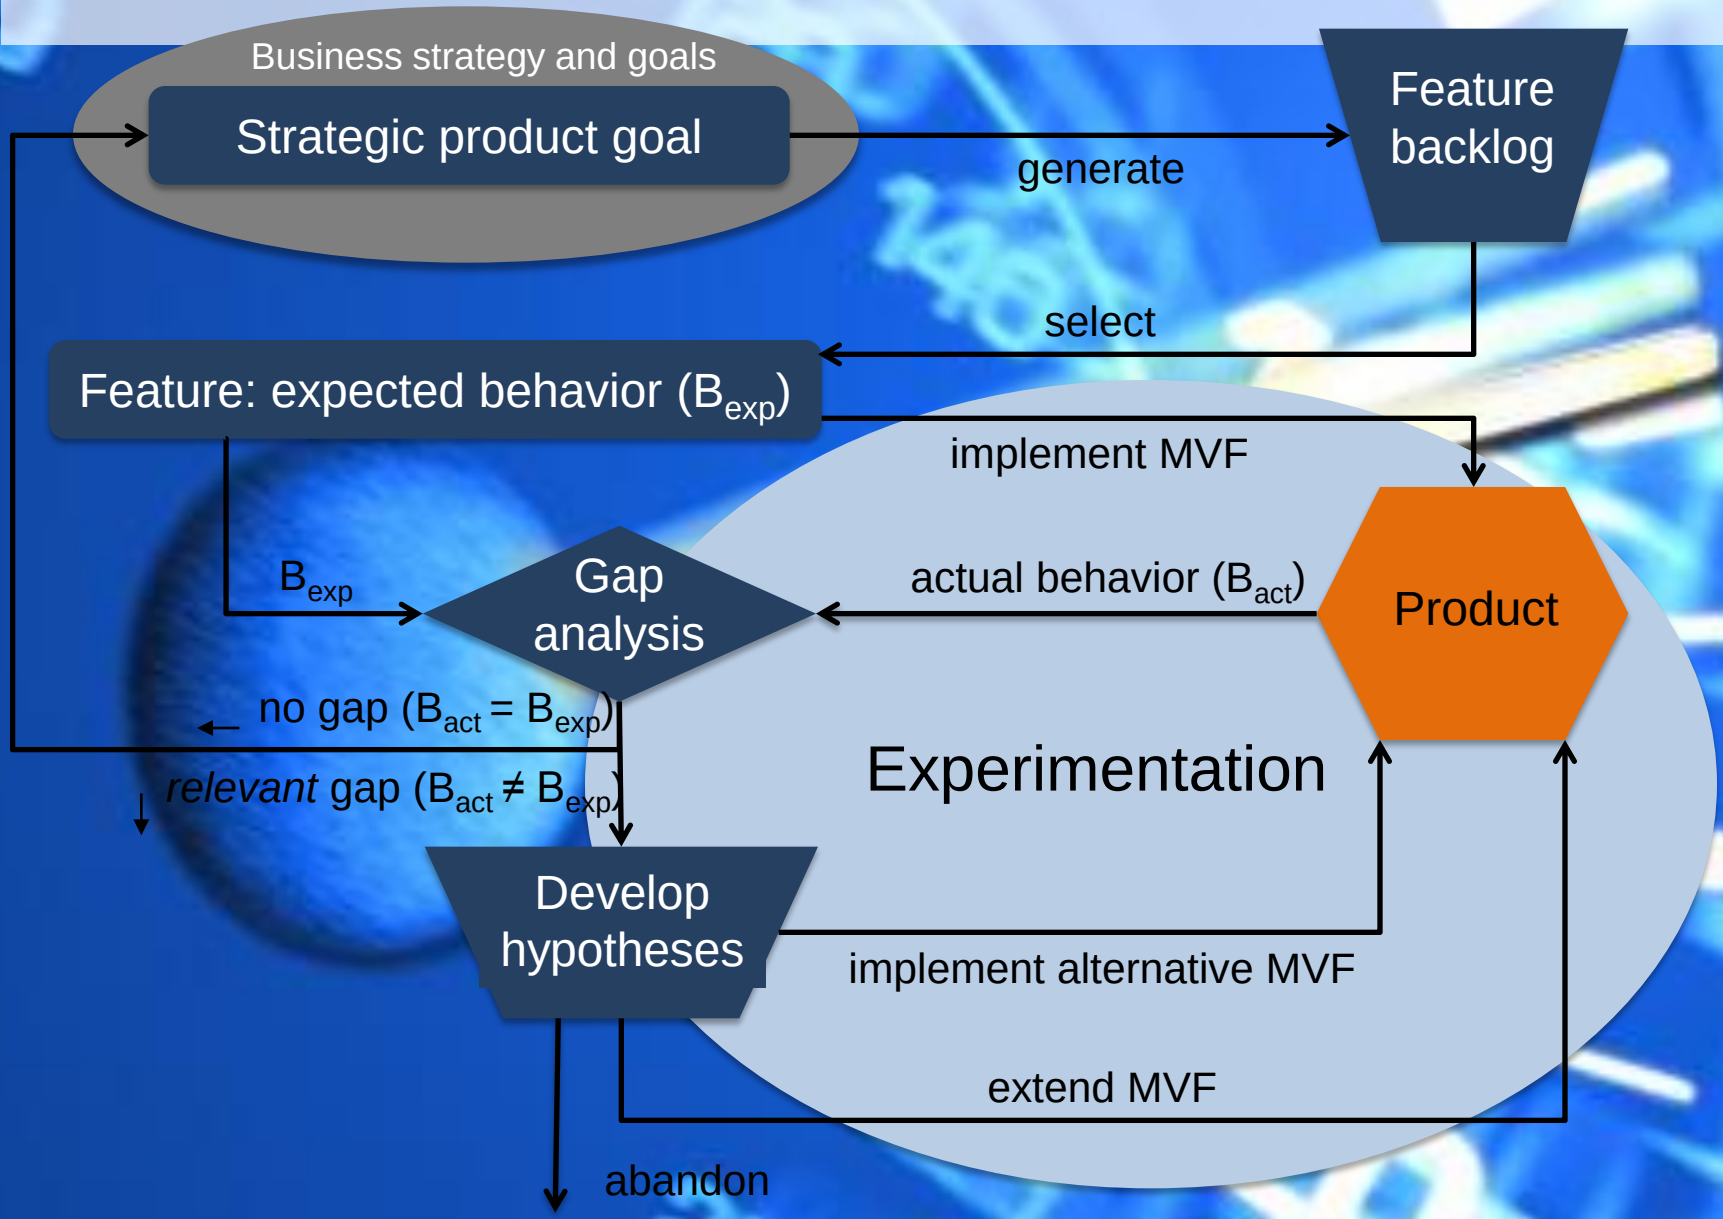
“In the future, all companies will be software companies”
George F. Colony (CEO Forrester Research)

Speed

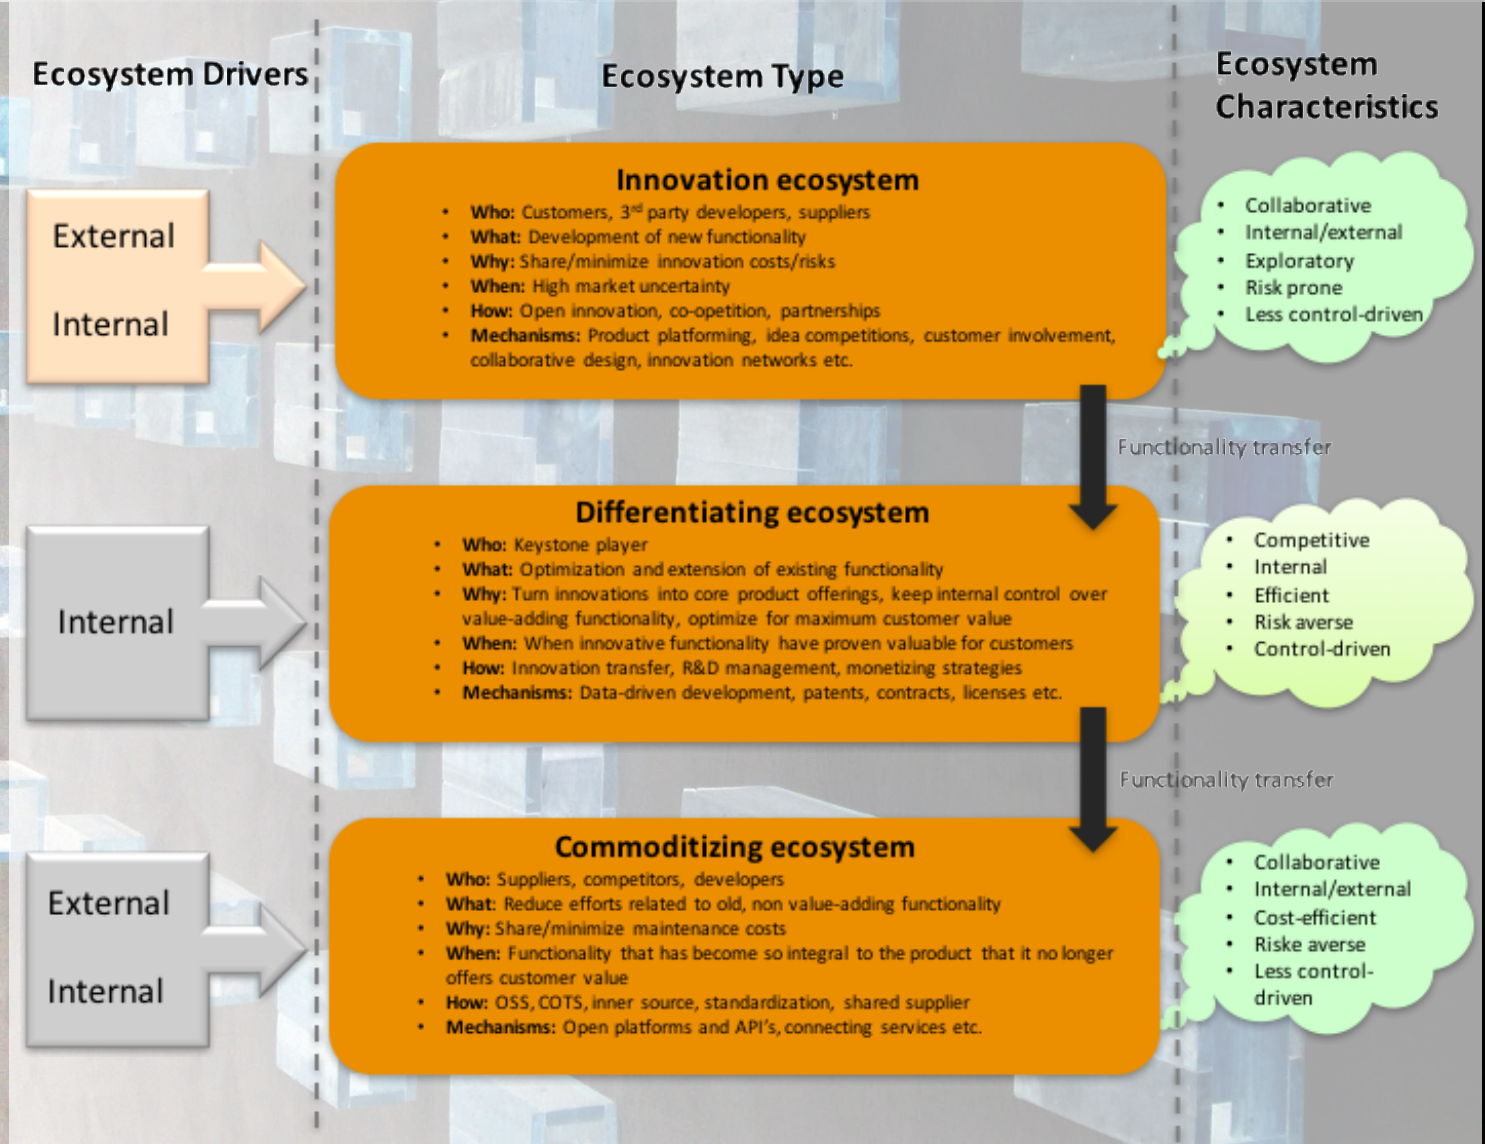
- Increasing **SPEED** trumps ANY other improvement R&D can provide to the company – the goal is **continuous deployment** of new functionality

- If you're not a front-line engineer, there is only ONE measure that justifies your existence: how have you helped teams move faster?
- Don't optimize efficiency, optimize speed

Data-Driven Development



Software Ecosystems



Not My Job?!

Strong LEADERSHIP needed from YOU

Information Technology

"This book gives you a great set of tools on how to bring business architecture and technology architecture together to drive a common set of goals and objectives."
– Brendan Bank, CTO Booking.com

"A must read for any leader or professional in the software industry. Simple, but insightful, Stairway models provide compelling and practical guidance for both every-day challenges and extensive transformations in the realm of software development."
– Mladen Pilipovic, Director of Engineering, Spotify

"SDE offers a fascinating and well-researched overview of the major trends in the software industry. If you want to survive as a software company in the 21st century, add this wonderful book to your reading list."
– Jurgen Appelo, author of Management 3.0 and Managing for Happiness

"Jan Bosch is a pioneer in how he systematically demonstrates the strength of changing the perspective for working with software. He shows how new services, products and value is created by drawing on the deep knowledge software developers have of customers, coupled with tools such as software architecture knowledge and ways of working, user feedback and data collection."
– Ingrid Nordmark (CEO Swedish Institute for Computer Science)

This book unifies those three of the most current best practices of the software-driven industry: speed, data, and ecosystems. Speed in value creation through software, namely continuous integration, continuous delivery, and continuous experimentation. Data to feedback what we did is actually the most effective and efficient to create value. Ecosystems to supersede classical business models by factors. The book explains the relationships, gives examples, and guides you with frameworks so that the application in your next project will let you harvest all the smartness and profitability that is possible in today's software development."
– Michael Kircher, CTO DATEV eG, Germany

"The excellent book of Speed, Data and Ecosystems by Jan Bosch captures the essence for any industry and company that is in the process of transforming into a digital future. Jan Bosch builds his knowledge based on academic research and experience from the industry combining this into a holistic approach how to work with software leveraging from the opportunities and meeting the challenges.
– Mats Melander, Director Automation Solutions at Tetra Pak
